

IN THE CLAIMS

Please amend the claims as follows:

1. (withdrawn) A global travel reporting system, comprising:
at least one traveler client system in communication with a central database server system;
a mainframe gateway server system in communication with a mainframe system and said central database server system;
a corporate charge card provider in communication with said mainframe system to provide traveler charge card transaction data;
a corporate banking provider in communication with said mainframe system for receiving payment direction and said central database server system provides general ledger transaction processing, reimbursement processing, and payment processing and directs payment from said corporate bank provider to said corporate charge card provider.
2. (withdrawn) The global travel reporting system of Claim 1, wherein said traveler client system downloads said traveler charge card transaction data from said central database server system to create an expense book.
3. (withdrawn) The global travel reporting system of Claim 2, wherein said expense book is created without a hypothecation of foreign exchange rates.
4. (withdrawn) The global travel reporting system of Claim 2, wherein a connection to said mainframe system via said central database server system and said mainframe gateway server system by said traveler client system provides submission of said expense book with an automatic review and editing of information entered into said expense book.

5. (withdrawn) The global travel reporting system of Claim 2, wherein said traveler client system submits said expense book to said central database server system for processing.

6. (withdrawn) The global travel reporting system of Claim 1, wherein said central database server system provides said payment direction to said corporate banking provider and reimburses travelers' bank account for said traveler's out-of-pocket expenses via said reimbursement processing and pays said corporate charge card provider for said traveler charge card transactions via said payment processing.

7. (withdrawn) The global travel reporting system of Claim 1, wherein said corporate charge card provider further provides valid cardholder information via said dedicated connection.

8. (withdrawn) The global travel reporting system of Claim 1, further comprising a corporate mailhub server system including at least one copy of a corporate email directory in communication with said central database server system.

9. (withdrawn) The global travel reporting system of Claim 8, wherein said corporate email directory is utilized by said central database server system to automatically send notifications regarding expense book incompleteness, approval, and rejection.

10. (currently amended) A method for global travel reporting, comprising:

receiving travel information from a first user associated with a travel activity;
creating an electronic expense book in response to said travel information;
receiving traveler charge card transaction data electronically from a corporate charge card provider and storing at least a portion of said transaction data in said expense book;

submitting said expense book;

identifying in an automated manner a second user to approve said expense book; and

routing said expense book in an automated manner to said second user for approval review in response to said submission and;

notifying said first user automatically regarding at least one of an expense book incompleteness, an approval, and a rejection in response to said review.

11. (canceled) The global travel reporting method of Claim 10, further comprising downloading said traveler charge card transaction data from said central database server system into said traveler client system to create an expense book.

12. (previously amended) The global travel reporting method of Claim 10, further comprising storing said information in said expense book without a hypothecation of foreign exchange rates.

13. (previously amended) The global travel reporting method of Claim 11, further comprising reviewing and editing information entered into said expense book in an automated manner .

14. (previously amended) The global travel reporting method of Claim 10, wherein the step of submitting said expense book further comprises the step of submitting said expense book from a traveler client system to a central database server system for processing.

15. (previously amended) The global travel reporting method of Claim 10, further including reimbursing a traveler's bank account for traveler out-of-pocket expenses.

16. (previously amended) The global travel reporting method of Claim 10, further including providing valid cardholder information via a dedicated connection from said corporate charge card provider.

17. (original) The global travel reporting method of Claim 10, further including receiving from a corporate mailhub server system in communication with said central database server system at least one copy of a corporate email directory.

18. (currently withdrawn) The global travel reporting method of Claim 17, further including notifying a traveler automatically regarding at least one of an expense book incompleteness, an approval, and a rejection using said corporate email directory.

19. (previously withdrawn) Computer-readable media tangibly embodying a program of instructions executable by a computer to perform global travel reporting, the program of instructions embodied in computer-readable media performing the sequence, comprising:

downloading traveler charge card transaction data from a central database server system to create an expense book, said traveler charge card transaction data obtained by said central database server system directly from a corporate charge card provider and having currency data for application to the corresponding traveler charge card transaction; and

automatically reimbursing said corporate charge card provider from a corporate banking provider for said traveler charge card transaction.

20. (previously withdrawn) A computer programmed to execute global travel reporting, the computer having the program performing the sequence, comprising:

downloading traveler charge card transaction data from a central database server system to create an expense book, said traveler charge card transaction data obtained by said central database server system directly from a corporate charge card provider and having currency data for application to the corresponding traveler charge card transaction; and

automatically reimbursing said corporate charge card provider from a corporate banking provider for said traveler charge card transaction.

21. (previously withdrawn) Computer-readable media tangibly embodying an interface program of instructions executable by the machine to provide a graphical user interface to a computer program for global travel reporting, the interface program of instructions embodied in computer-readable media performing the sequence, comprising:

displaying icons and questions on the visual display unit at a traveler client system; and

obtaining data from the traveler, in response to said displaying, and providing the traveler data to the computer program, where the computer program, based on said traveler data, includes downloading traveler charge card transaction data from a central database server system to create an expense book, said traveler charge card transaction data obtained by said central database server system directly from a corporate charge card provider and having currency data for application to the corresponding traveler charge card transaction and reimbursing automatically said corporate charge card provider from a corporate banking provider for said traveler charge card transaction.
